

Gray-Collar Skill Worker Mobile Application

1. The Vision:

Millions of Tier 2 and Tier 3 Indian workers (Nurses, Sales Reps, Contractors) possess high-market-value skills but suffer from Identity Friction. Standard resumes are exclusionary, and LinkedIn assumes a white-collar career trajectory. Hiring currently defaults to unverified word-of-mouth or exploitative middle-men. Project Vouch replaces text-heavy barriers with Visual Proof and Peer Trust.

2. Core Feature Ecosystem:

- A) Zero-Friction Onboarding: WhatsApp/Phone OTP entry. No long-form text entry. The primary onboarding action is a 30s skill video upload.
- B) The Skill-Reel (Discovery): Vertical, auto-playing video feed. Filtered by a 50km radius and AI-matched skill categories. Optimized for high-glare visibility.
- C) The Vouch Score: A composite trust metric (1-100) derived from phone-verified peer endorsements and sentiment-analyzed voice note reviews.

3. Innovative Differentiators:

- A) AI "Voice Interviewer": An interactive AI bot that conducts 2-minute mock interviews in Hindi, Marathi, Telugu, etc. It analyzes "Communication Confidence" and "Persuasion Clarity" for Sales/Admin, etc roles.
- B) Proof-of-Work (Time-Lapse) Reels: Dedicated modules for visual artisans (Jewelers, Decorators). Enables capturing "Day 1 to Done" progress, providing evidence of craftsmanship and consistency.

4. Technical Implementation Details:

- A) Offline Submission: Local caching allows video recording in "dead zones" with auto-resume uploads.
- B) WhatsApp Bridge: Seamless transition from candidate discovery to direct messaging.
- C) Realistic Hindi Voice: AI voice feedback uses localized Indian accents to reduce intimidation for Tier 3 users.
- D) The Badge System: Verified Skill badges.

CRITICALITY:

If video buffering exceeds 3 seconds on Tier 3 (3G/Low 4G) networks, the platform fails. Success requires aggressive H.265/AV1 compression, intelligent edge-caching, and low-latency media pipelines
